

Operation #2

CS 1400 – Satterthwaite

We are all looking forward to retiring someday. Unfortunately, the age that we can retire keeps getting pushed further back because the average lifespan is continually increasing. (Thanks a lot, advances in health care!) The current age for Full Retirement for those born after 1960 is 67 years old.

Assuming that we will retire on our 67th birthday, write a Java program that prompts the user for his/her birth month, day, and year and then prints out the date the user will retire.

Sample session:

```
Enter the month you were born: March
```

```
Enter the day you were born: 29
```

```
Enter the year you were born: 1985
```

```
You will retire on March 29, 2052.
```

Submit your .java file containing the source code via WSU Online.
